## **DETAILED ACTION**

#### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Non-elected claims 5-10 have been cancelled so that prosecution of the case may finish.

#### Election/Restrictions

2. This application is in condition for allowance except for the presence of claims 5-10, directed to an invention non-elected without traverse. Accordingly, claims 5-10 have been cancelled.

### Drawings

3. The drawings were received on 1 August 2006. These drawings are acceptable.

# Allowable Subject Matter

4. The following is an examiner's statement of reasons for allowance:

As to Claim 2, the prior art of record lacks the combination of light irradiation and detection sections, a carbon dioxide concentration control device, and a display showing variations in both carbon dioxide concentration and light detection over time.

As to Claim 3, the prior art of record lacks the combination of light irradiation and detection sections, a carbon dioxide concentration control device, and a display showing variations in a correlation between carbon dioxide concentration and light detection over time.

As to Claim 4, the prior art of record lacks the combination of light irradiation and detection sections, a carbon dioxide control device, and a computer that integrates to find a sensitivity distribution based on a combination of varied carbon dioxide concentration and measured light signals.

It should be noted that the closest prior art references are that of Heinonen'385 and Gorti'658. Heinonen'385 discloses a system that controls the concentration of carbon dioxide, but the system does not display variations in the concentration over time. Gorti'658 discloses a system that measures blood flow using light irradiating and detection sections, but the system does not display variations in the concentration over time.

In light of these typical prior art references, a thorough search of prior art failed to disclose any references or references which, taken alone in combination, taught or suggested a correlation or relationship between carbon dioxide concentration and light detection intensity as claimed..

Art Unit: 3735

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Karen E. Toth whose telephone number is 571-272-6824. The examiner can normally be reached on Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Charles Marmor, II can be reached on 571-272-4730. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
